Sequence 84, Application US/09404879A

Patent No. 6468546

GENERAL INFORMATION:
APPLICANT: Mitcham, Jennifer L.
APPLICANT: King, Gordon E.
APPLICANT: King, Gordon E.
APPLICANT: Algate, Paul A.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE
TITLE OF INVENTION: DIAGNOSIS OF OVARIAN CANCER
FILE REFERENCE: 210121.46202
CURRENT APPLICATION NUMBER: US/09/404,879A
CURRENT FILING DATE: 1999-09-24
NUMBER OF SEQ ID NOS: 393
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 84
                                                                                                                                                                                                                                                                                                                                                         US-09-404-879A-84/c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-10-627-571-2 (1-188) x US-09-134-001C-1541 (1-2637)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel method for identifying a compound that modulates T lymphocyte activation. The method comprises contacting a T cell comprising an A-raf-1 or TCPTP/PTPN2 polypeptide with a compound, where the A-raf-1 or TCPTP/PTPN2 polypeptide is encoded by a nucleic acid that hybridises to a nucleic acid encoding a polypeptide having a
                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; T lymphocyte activation; T-cell; A-raf-1; TCPTP/PTPN2; asthma; immunosuppressive; antiasthmatic; antiallergic; antiinflammatory; lymphocyte activation; lymphocyte migration; cytokine production; cell surface marker expression; antibody production; apoptosis; allergy; antibody proliferation; antibody differentiation; hypersensitivity; antibody proliferation; antibody differentiation; hypersensitivity; graft versus host disease; inflammation; gene; ss; TNF-induced protein;
                                                                                                                  Identifying a compound that modulates T lymphocyte activation, useful for monitoring changes in cell surface marker expression, comprises contacting a T cell comprising an A-raf-1 or TCPTP/PTPN2 polypeptide with a compound.
                                                                                                                                                                                                                                                                                                                                                                                                          Homo
                                                                                                                                                                                                                                                                                          03-OCT-2001; 2001US-0327212P
                                                                                                                                                                                                                                                                                                                                                   10-APR-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cc sequence selected from two 606-amino acid sequence and a 415-amino acid consequence given in the specification. The method of the invention has cid immunosuppressive, antiasthmatic, antiallergic, and antiinflammatory cactivity. The method is useful for identifying compounds that modulate lymphocyte activation and migration, and for monitoring changes in cell surface marker expression, cytokine production, antibody production, consideration and differentiation, and apoptosis, using either cell lines cor primary cells. The A-raf- 1 or TCPTP/PTPN2 proteins may be used as correctivation and migration, e.g. for the treatment of diseases in which modulation and migration, e.g. for the treatment of diseases in which modulation of the immune response is desired such as delayed type cand acute and chronic inflammation. Modulators of lymphocyte activation and migration. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1892

immunizing )
                                                                                                                                                                                                                                                                           The invention relates to an anti-apoptopic gene SSC-S2 and encoded protein. The gene is a positive mediator of tumour growth and metastasis in certain cancer types. The SSC-S2 protein can be expressed by standard recombinant methodology. The SSC-S2 polypeptide is useful as a target for identifying compounds that modulate cancer progression by inhibiting apoptosis, as a target for detecting cancers where this polypeptide is overexpressed, e.g. renal and overian cancers, and leukemia. The antibody and antisense oligonucleotide can be used to treat cancer and to inhibit cancer cell proliferation and/or metastasis. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                  New SCC-S2 polypeptides and nucleic acids encoding them, useful as target for identifying compounds that modulate cancer progression inhibiting apoptossis, as a target for detecting cancers, or for immunizing animals.
                                                                                                                                                                                                                                                Sequence 1915

```

The present invention describes primer sets for synthesising 56 length cDNAs defined in the specification. Where a primer set complementary to an oligo-dT primer and an oligonucleotide complementary to complementary to a polynucleotide which comprises one of

sequences defined in the specification, where

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end cCC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC oligonucleotide which comprises a 3'-end sequence, where the combination of the 5'-end sequence's end sequence is selected from those defined in the comprises at least 15 nucleotides and the combination of CC specification. The primer sets can be used in antisense therapy and in CC gene therapy. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAH13633 to AAH19742 represent human cDNA sequences; AAB92446 to AAB95893 CC represent human amino acid sequences; and AAH13632 represent coligonucleotides, all of which are used in the exemplification of the

                                                                                                                                                                                                                                                                              CC (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 cmucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary to a polynucleotide comprising a sequence complementary to a coligonucleotide which comprises a 3'-end sequence, where the coligonucleotide which comprises a 1'-end sequence, where the coligonucleotide comprises a 1'-end sequence, where the coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in the comparison of the full-length cDNAs. The primers are useful for synthesising polynucleotides, carticularly full-length cDNAs. The primers are also useful for the comparison of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH30316 to AAH3328 and coligonucleotides, all of which are used in the exemplification of the coligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           29-JUL-1999;

C gastrointestinal-Gen, antiasthmatic, antiarreriosclerotic, immunomodulator, cerebroprotective, vasotropic, immunosuppressive or cuseful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The condition is an cimmune disorder, an inflammatory disorder, and inflammatory disorders, hyper-light syndromes, hyperidisory, viral inflammatory, hyper-light syndromes, hyperidisory, viral inflammatory, viral replication, host cell continued disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper companital conditions, birth defects, necrotic lesions, wounds, corgan transplant rejection, conditions related to organ transplant conditions, borth defects, necrotic lesions, wounds, corgan transplant rejection, conditions related to organ transplant corgan transplant sequence is that of a human gene which is subject to the novel association with the NF-kappaB pathway of the corgan transplant association with the NF-kappaB pathway of the corgan transplant and cordant sequence does not appear in the specification but was obtained by the indexer from Genbank.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to the novel association of protein sequences the genes which encode them) to the NF-kappaB pathway. The invention be useful for the production of compounds with an antiinflammatory,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
```

This invention relates to the novel association of protein sequences (and the genes which encode them) to the NF-kappaB pathway. The invention may be useful for the production of compounds with an antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antiinflammatory, creebroprotective, vasotropic, immunosuppressive or wilnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions conditions of diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder and immune disorder and inflammatory disorder and immune disorders, hodgkin's lymphomas, haematopoietic tumours, hyper-IgM cytostatic disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM cytostatic disorders, hospablasia, x-linked anhidrotic ectodermal dysplasia, x-linked anhidrotic cytodermal dysplasia, x-linked anhidrotic survival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper immune activity, disorders related to aberrant acute phase responses, cytomatorial sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper cytosis and transplant rejection, conditions, birth defects, necrotic lesions, wounds, cytostic subject to the novel association with the NF-kappaB pathway of the cytosis related to aberrant signal transplant encounters and the propagation in cells infected invention. Note: This sequence does not appear in the specification but was obtained by the indexer from Genbank. Claim 1; diseases associated with NF-kappaB pathway. SEQ ID NO 217; 237pp; English.

Sequence 2003 B₽; 667 A; 324 C; 406 G; 606 Τ, 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                            US-10-627-571-2 (1-188)
                                                                                                                                                                                          The present invention relates to novel DNA and protein sequences which care associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (ii) for screening of evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (iv) for carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining carcinoma associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of sequence. Note: This patent is an equivalent to basic patent CA gene useful as markers of usefunce. Note: This patent is an equivalent to basic patent.
                                                                                                                                                                       Sequence 2034
                                                                                                                                                                                                                                                                                                                                                                                                                       Recombinant nucleic acid useful for diagnosis and treatment comprises a nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                  Claim

                                                                                                                                                                                                                                                                                                                                                                                 Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                       Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC This invention relates to the novel association of protein sequences (and CC the genes which encode them) to the NF-kappaB pathway. The invention may CC be useful for the production of compounds with an antiinflammatory, CC cytostatic, hepatchropic, virucide, antiarthritic, antiineumatic, CC gastrointestinal-Gen, antiasthmatic, antiarthritic, antiineumatic, CC immunomodulator, cerebroprotective, vasotropic, immunosuppressive or cultivity or for gene therapy. The proteins and nucleotides are CC useful for diagnosing, preventing, treating, or ameliorating conditions CC or diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder, an inflammatory disorder and condition is an CC immune disorders. Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM syndromes, hypohidrotic ectodermal dysplasia, X-linked anhidrotic syndromes, hypohidrotic ectodermal dysplasia, X-linked anhidrotic survival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atheroselerosis, cachexia, euthyroid sick Syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper responses, hypercongenital conditions, birth defects, necrotic lesions, wounds, corporations, disorders related to aberrant signal transplant crysction, conditions related to aberrant signal transplant conditions. The present sequence is that of a human gene which is subject to the novel association with the NF-kappaB pathway of the convention. Note: This sequence does not appear in the specification but CC was obtained by the indexer from General association but

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              멂
                                                 The present invention relates to novel DNA and protein sequences which CC are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of CC a bioactive agent capable of modulating the activity of CAP; (iv) for cevaluating the effect of a candidate carcinoma drug; (v) for diagnosing CC carcinoma; (vii) for unhibiting the activity of CAP; (vii) for treating CC carcinoma; (viii) for neutralizing the effect of CAP; (vii) as a biochip; CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for CC determining Carcinoma Associated (CA) gene copy number. In addition, the CC carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent CC US2002182586A1, for which no sequence data was published

                                                                                                                                                                                                                                                                                                                                 by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 110 genes, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, developmental abnormalities and foetal deficiencies, blood disorders, diseases of the immune system, autoimmune diseases, inflammation, allergies, Alzheimer's and cognitive disorders, schizophrenia, arthritis, asthma, psoriasis, sepsis, skin disorders, atherosclerosis, diabetes, cardiovascular disorders, kidney disorders, digestive/endocrine disorders, infections and AIDS. The polypeptides are also useful for identifying their binding partners. The sequences given in AAX97917 to AAX97315 and AAY36223 are used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAX99916 to AAX98029 represent 110 isolated human secreted protein genes. AAY36727 to AAY36727 represent the secreted proteins encoded by the 110 human genes. The genes and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Page 330; 537pp; English

identification, radiation hybrid mapping or long-range restriction mapping. The polypeptides and antibodies are useful for providing immunological probes for differential identification of the tissues immunohistochemistry assays. The polypeptide, polynucleotide, agonist or antagonist may also be used as a food additive or preservative to increase or decrease storage capabilities, fat content or other nutritional components. The present sequence represents cDNA encoding a novel human secreted protein. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at The invention relates to an isolated HKABT24 nucleic acid molecule. The polypeptides, nucleic acids and antibodies are useful for diagnosing a pathological condition or a susceptibility to a pathological condition, for preventing, treating, or ameliorating a medical condition, such as cancer, inflammation and other immune disorders, neurological and blood clotting disorders. The nucleic acids are also useful for chromosome Sequence 1943 seqdata.uspto.gov.uk/sequence.html?DocID=20030055236 BP; 629 A; 325 ç; 399 G; 586 Ή. 0 U; 4 Other

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
The invention relates to 592 new human secreted polypeptides useful for CC diagnosing, treating or preventing e.g. immune disorders, inflammatory CC conditions, respiratory disorders, cancers, CNS disorders, or CNS disorders, or convergence at least 95% identical to the new sequences. The polypeptides, CC antibodies or antibody fragments that bind to the polypeptides, nucleic CC acids encoding the polypeptides, agonists or antagonists that binds to CC the polypeptide, are useful in preparing diagnostic or pharmaceutical CC compositions for diagnosing, treating or preventing an e.g. immune CC disorders, inflammatory conditions (e.g. inflammatory bowel disease, CC nephritis or Crohn's disease), respiratory disorders (e.g. asthma and CC e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative CC disorders (e.g. parkinson's disease or Alzhaimer's disease), and CC cardiovascular disorders (e.g. atherosclerosis or myocarditis). The CC polynucleotides are useful for chromosome identification, chromosome CC mapping, for controlling gene expression through triple helix formation or antisense DNA or RNA, in gene therapy, for identifying individuals from minute biological samples, in forensic biology, and as hybridization concerns the polypeptides are useful for as molecular weight markers on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADA56241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human secreted polypeptides and polynucleotides, useful for diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, or neurodegenerative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 21-MAR-2001; 2001US-0277340P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                           Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of binding to Carcinoma Associated protein (CAP); (iii) for screening of binactive agent capable of binding to Carcinoma Associated protein (CAP); (iii) for screening of a binactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) for treating; (x) for diagnosing carcinoma are uncommana or a propensity to carcinoma; and (xi) for determining Carcinoma and (CAP) gene copy number. In addition, the CAP genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA gene sequence. Note: This patent is an equivalent to basic patent US2002182586AI, for which no segmence data was analyzed.

                                                   The present invention relates to novel DNA and protein sequences which CC are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of carcinoma; (vi) for inhibiting the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (iv) for carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for condition of determining Carcinoma associated (CA) gene copy number. In addition, the CAP genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent.
